HAGA UNA CITA

Endoscopy in his Specialty of
Gastroenterology.

Colorectal Cancer affects an equal number of men and women. Many women, however, think of Colon Cancer as a disease only affecting men and might be unaware of important information about screening and preventing colorectal cancer that could save their lives.

Beginning at age 50, all men and women should be screened for colorectal cancer
EVEN IF THEY ARE EXPERIENCING NO PROBLEMS OR SYMPTOMS.

A colonoscopy screening exam is almost always done on an outpatient basis. A mild sedative is usually given before the procedure and then a flexible, slender tube is inserted into the rectum to look inside the colon. The test is safe and the procedure itself typically takes less than 30 minutes.
